1. Project Overview

Meeting Intelligence is a polished AI meeting notetaker web application inspired by Fathom. It was built as a product rebuild challenge. All

meeting data is realistic but fictional — recording and calendar integration are simulated, and no real audio is captured.

Key Highlights

- Meeting dashboard with searchable list, participant avatars, duration, and tags

- Speaker-attributed, timestamped, searchable transcript with highlight actions

- Simulated playback with waveform visualizer, timeline seek, and playback speed

- AI summaries across 5 templates: Standard, Executive, Sales, Engineering, Interview

- Per-meeting and global action items with completion toggles (localStorage persistence)

- Highlights that can be bookmarked and shared as public clips

- Global search across titles, participants, transcript, and action items

- Self-contained shareable clip links (data encoded in URL — no backend required)

- Simulated live recording session with live transcript feed on the Settings page

- 6 seeded demo meetings including an 8-participant 60-minute product planning session

Suggested Walkthrough Flow

- Open Home (/) to show the dashboard overview

- Go to Meetings list (/meetings) and use search / tags

- Open Q4 Product Planning (/meetings/meet-001)

- Scroll the transcript, switch summary templates (Standard, Executive, Sales, Engineering, Interview)

- Highlight a transcript line and use Share to generate a public clip link

- Open the shared clip link in a new tab to show the public view

- Visit Action Items (/action-items) and toggle completion

- Try Global Search (/search) for a keyword

- Open Settings (/settings) to show the simulated live recording
